

AMBIENT OPERATING SYSTEM FOR PRECISION LONGEVITY

Start at the bed. Sense the whole community.

One privacy-first ambient layer for your whole community, under your brand. Care Daily learns each resident's rhythm across residences and common areas, and brings staff, families, and your wellness team in when it matters.

Backed by research funded by the National Institute on Aging with UC Berkeley • **Deployed** across senior living, PACE & home health

What Care Daily senses in every residence

No cameras
Radar & ambient,
nothing to wear

24/7 ambient
Always on, in the background

Campus-wide
Every residence & common area

Nurse call + EHR
Integrates with what you run

FROM THE BED, OUTWARD — THE FIVE PILLARS OF AMBIENT SENSING

01

Sleep

Rest, bed exits,
breathing and recovery.

02

Daily activities

Mobility, meals,
and daily routines.

03

Personal safety

Falls, meds, stove,
water, access, lighting.

04

Personal signals

Wearables and vitals, layered in.

05

Connection & community

Family, friends,
neighbors and staff.

Three layers. One ambient operating system.

Start with ambient safety and clear workflows for every shift. Add management intelligence that shows where time really goes. Then unlock precision longevity for premium Independent Living. All three build on the same privacy-first sensors and data, so you grow at your own pace on one platform.

1 Operations AVAILABLE NOW

Tells staff who needs attention now, and why, so they respond faster, safer, and with context.

- Prioritized fall and risk alerts routed to the right caregiver with context on what changed and where.
- Medication adherence signals that surface residents off routine so staff intervene early.
- Sleep, nighttime, mobility, and bathroom patterns that flag rising risk before an incident.
- Nurse call, lighting, access, and stove safety in one workflow view for the whole community.

2 Management FOR LEADERS

Gives leaders objective visibility into where staff time goes and which residents are rising in acuity.

- Time-and-attention maps: where staff spend time by building, neighborhood, shift, and role.
- Workload-balance views that align staffing with real demand across neighborhoods and floors.
- Resident-level time that highlights individuals consuming more staff hours, so care plans get reviewed earlier.
- Trend reports connecting operations, acuity, and outcomes to plan and defend staffing.

3 Longevity PREMIUM IL

Turns campus-wide ambient signals into personalized wellness programs for premium Independent Living.

- A daily view for your wellness team, not an annual snapshot, from continuous activity, rest, and engagement insight.
- Cohort and building patterns showing how programs, amenities, and environments shape wellness over time.
- Resident-friendly wellness views under your brand that celebrate progress and participation.
- A foundation for differentiated, longevity-focused packages and brand positioning.

Care Daily works **in conjunction with your wellness team** across the seven dimensions of wellness:

Physical Emotional Social Intellectual Spiritual Vocational Environmental

"Care Daily fills the missing gap in delivering proactive care, providing the behavioral, environmental, and physical living patterns of the patient."

CHIEF NURSING OFFICER

One ambient layer for your whole campus, under your brand.

Serve assisted living, memory care, Independent Living, and home-based care on one unified platform. Talk to the Care Daily team to scope a rollout across your community.
